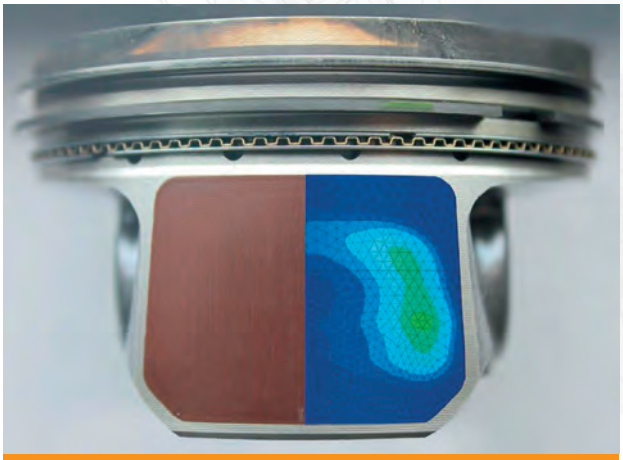
STEP INTO THE FUTURE

The EcoTough® NG piston coatings have been specially designed to meet the extreme load conditions of internal combustion engines. Thanks to a metal oxide-reinforced construction with additional embedded solid lubricant particles, they **reduce skirt wear by up to 40%*** when compared to market standards with a surface application of just 15 microns. This also **reduces piston frictional losses by up to 15%***.



Direct comparison of simulated contact load (right) and EcoTough-New Generation piston skirt coating with no visible wear (left) after testing in a 1.6-litre petrol engine

This means EcoTough® NG significantly **improves fatigue strength** and **increases fuel efficiency** for an environmentally friendly engine that's **more durable and efficient** than ever before. Application of these piston skirt coatings using fully automated, large-scale production processes means the excellent wear and friction properties can be achieved within economical cost targets.
